The cleverQ voice output module provides the ticket number, the room or the place to which the customer can go. Voice is played is via the audio outputs on the monitor, via displays in the waiting area or via the devices of your choice.

This means that the call is not restricted to purely visual means and informs the person waiting, even if he or she is distracted and cannot see the monitors. This module is also an enormous relief for people with impaired vision.

**Digital audio output**

**Freely configurable announcements**

**Advantageous for visually impaired persons**
